UAE National Cybersecurity Strategy — 2025

Source status

The 2019 strategy previously stored in this file is outdated and has been superseded for current-policy purposes. The UAE Cabinet approved a new National Cybersecurity Strategy on **3 February 2025**. The Head of the UAE Cyber Security Council announced on **11 February 2025**, during the World Government Summit 2025, that the strategy would be officially launched that week.

The current primary source is the **UAE Cyber Security Council strategy document**:

> National Cyber Security Strategy — UAE Cyber Security Council, official document

The official document URL is retained above because the Cyber Security Council serves the strategy document directly and the document is not rendered as HTML by the extraction service. Do not use the former 2019 `u.ae` page as the current strategy source.

Official Cabinet announcement — 3 February 2025

The UAE Cabinet approved the National Cybersecurity Strategy. The Cabinet stated that the strategy would continue strengthening cybersecurity measures, ensuring a resilient and secure digital environment that protects national assets and supports future progress.

The Cabinet described the strategy as based on five main pillars:

1. **Governance**
2. **Protection**

3. **Innovation**
4. **Establishing and building**
5. **Partnership**

The strategy seeks to:

- Establish a cohesive and highly effective governance framework for cybersecurity.
- Ensure a secure, resilient, and sound digital environment.
- Enable the safe and swift adoption of innovations.
- Enhance national capabilities in digitization and cybersecurity.
- Bolster partnerships and collaborative relations at national and international levels.

Official launch announcement — 11 February 2025

The Emirates News Agency reported that Dr. Mohamed Al Kuwaiti, Head of the UAE Cyber Security Council, announced that the National Cybersecurity Strategy would be officially launched during the week of the World Government Summit 2025.

The announcement states that the recently approved strategy is a **five-year National Cybersecurity Strategy** endorsed by the UAE Cabinet. It is built around five key pillars designed to enable the safe and rapid adoption of innovations while ensuring a secure, resilient, and robust digital environment.

The announcement further states that the strategy includes specific goals and initiatives aimed at strengthening and growing the national economy, in addition to protecting critical infrastructure.

The Cyber Security Council also stated that it was finalising related policies and cybersecurity standards to enhance institutional compliance and security measures.

Knowledge-base ingestion guidance

Use the Cyber Security Council document as the primary source for clause extraction. Use the Cabinet and WAM announcements as corroborating official context for approval,

launch, timeframe, pillars, and high-level objectives.

For CascadeGuard, represent the following as strategy-level, non-legislative policy context unless the primary document supplies a more specific binding mandate:

- `governance`: national cybersecurity governance and institutional coordination.
- `protection`: protection of the UAE digital environment and national assets.
- `innovation`: secure adoption of emerging technologies, including AI.
- `establishing_and_building`: national cybersecurity and digitization capabilities.
- `partnership`: national and international collaboration.
- `critical_infrastructure`: protection of critical infrastructure.
- `incident_coordination`: only create concrete reporting or response obligations when supported by a clause in the Cyber Security Council document or another applicable law or regulation.

Do not infer a legal deadline, regulator, reporting duty, or authority to disclose health or telecom data from the five pillars alone. Those mappings require a specific cited provision and human review.

Relationship to the old 2019 source

The former 2019 strategy page described five pillars, 60 initiatives, a National Cyber Incident Response Plan, critical sectors, and a three-year period from June 2019. That material may be retained separately as historical context, but it should not be loaded as the current UAE National Cybersecurity Strategy for the 2025-era scenario.

Related current official source

For AI-specific cybersecurity requirements, also ingest the current official UAE page for the **National Cyber Security Policy for Artificial Intelligence**, established by the Cyber Security Council and updated on 2 July 2026:

🇦🇪 The National Cyber Security Policy for Artificial Intelligence — official UAE Government page

That policy covers governance, infrastructure and application security, algorithm security, operational safety, adversarial AI attacks, and AI monitoring and response. It is complementary to the national strategy and should be stored as a separate source, not merged into this strategy record.
